Next-generation, high-density storage workstation with up to 5 expansion slots. With up to 80 TB of storage, this portable computer is ideal for post production or test and measurement.

Massive Storage

What separates the NetPAC from the rest is its massive storage. This portable computer supports up to 16 removable 2.5" removable drive bays for a total of 80 TB storage. In addition to massive storage, these hot swappable HDD/SSD make for easy transfer, upgrade, and maintenance.

High Speed Read/Write

The NetPAC is integrated with high speed 12Gb/s RAID card and media for the fastest data sequential write performance. It has been designed from ground up to meet the requirements on cooling, massive storage expansion and serviceability.

Network Appliance Platform

When you combine the massive storage, high-speed RAID card, and great cooling, the NetPAC simply becomes a powerful network appliance platform. It is an all-in-one portable form factor that can be integrated with high-performance 20G/40G network capture cards. As a result, it is capable of sustained, multi-gigabit per second recording of network traffic without packet drops.
